SUMMARY

Detail-oriented Web Developer with a strong foundation in modern web technologies (JavaScript, React, Node.js), hands-on digital forensics experience, and currently working toward CompTIA Security+ certification. Proficient in mobile auditing and forensic analysis using FTK Toolkit, FTK Imager, and Android Studio. Seeking to leverage web development and security skills to build secure, scalable digital experiences.

SKILLS

- Languages: C++, C#, Java, JavaScript (ES6+), HTML5, CSS3, Python
- Frameworks & Libraries: Node.js, Spring Boot, Vaadin, Streamlit, Bootstrap
- Databases & Forensics: MongoDB, MySQL, DB Browser for SQLite (DB4S)
- Forensics & Mobile Tools: FTK Imager, FTK Toolkit, Registry Editor, Registry Viewer, Android Studio, Android Package Kit (APK)
- Developer Tools & Platforms: Git, GitHub, Ollama, Linux, npm, macOS, Windows
- Certifications: Certificate in Web Development

EXPERIENCE

Web Developer Contractor, Open Avenues Foundation, December 2021-February 2022

Boston, MA

- Contributed to nonprofit program led by global innovators to break down barriers and build social capital for diverse U.S. students pursuing STEM and business careers.
- Developed user-friendly CRM application using JavaScript, ReactJS, and Bootstrap, enhancing user experience and engagement.
- Coordinated team communications and project planning sessions, streamlining development process and ensuring alignment on project goals.

EDUCATION

Bachelor of Science degree

Computer Science, Bridgewater State University, Bridgewater MA Expected in May 2027

Associate of Science degree

Computer Science, Massasoit Community College, Brockton MA May 2025

RELEVANT PROJECTS

Movie Recommendation AI Assistant | Python, Streamlit, Ollama (Llama 3.2), CSS | Aug 2026

- Developed a responsive single-page movie recommendation application using Streamlit and custom CSS, enabling users to submit natural-language preferences and receive real-time recommendations.
- Integrated Ollama (Llama 3.2) for local natural-language processing and context-aware movie recommendations, eliminating reliance on external cloud-based LLM APIs.
- Engineered Python prompt-processing and JSON parsing to structure LLM responses into recommendation data and dynamically render movie information within the application.

Full Stack CRM Dashboard | Java, Vaadin, MongoDB, Python | Dec 2025

- Developed a full-stack inventory management application using Java and Vaadin, enabling real-time inventory tracking across multiple shelter departments.
- Designed and implemented a MongoDB data schema to digitize animal records and administrative data, improving data organization and retrieval while reducing reliance on physical paperwork.
- Engineered Python backend automation for document processing and communication workflows, streamlining information exchange between shelter staff and volunteers.

Dice Game Challenge | JavaScript (ES6+), HTML5, CSS3 | Nov 2021

- Engineered a dynamic two-player web app using Vanilla JavaScript, featuring custom game-state logic, randomized turn management, and win-condition validation.
- Utilized native DOM manipulation and asynchronous event listeners to deliver responsive, real-time UI updates and seamless state transitions without external libraries.
- Designed a clean, accessible layout using HTML5 and CSS3, integrating modular functions for instant state resets and smooth user experience.

WORK EXPERIENCE

Sit Means Sit Massachusetts | Dog Trainer / Behavioral Specialist | Oct 2018 – Apr 2021

- Evaluated complex canine behavioral data and aggression profiles to design targeted rehabilitation programs aligned with client objectives.
- Conducted client intakes, recorded detailed background and medical histories, and resolved complex customer inquiries regarding training protocols.
- Executed customized exercise plans and monitored behavioral progress, making real-time adjustments based on analytical observations.
